GemLightbox User Manual

## *Welcome to the GemLightbox Family*

We are very excited to have you take your first steps into effortless jewelry photography. Over the years, we've helped over 2,000+ jewelers in the digital space and hope to share the same experience with you.

In this guide, we will teach you how to use the GemLightbox, from setting up, shooting angles and other great features.

We recommend you read our full tutorial guide to make the most of your GemLightbox on the following page:
https://picupmedia.com/gemlightboxguide/

Note: Before you shoot for the first time, peel of the protective cover on the front reflector and the top lid.

Included With GemLightbox

| **GemLightbox** | **Photography Table** | **Magnetic Stand** | **Necklace & Earring Stand** | **Smartphone Holder** | **Universal Power Adapter** |

Setting Up GemLightbox

1. Use the supplied power adapter to power GemLightbox. Simply plug the cord into the side of GemLightbox and the other side to an electrical socket. Press the power button once to turn on GemLightbox.

The plugs are interchangeable to fit with your local power socket. When interchanging plugs, ensure it is **completely inserted to the adapter**.
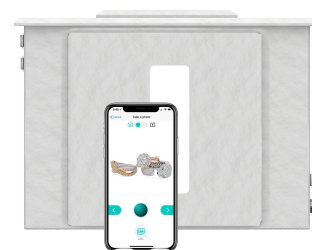

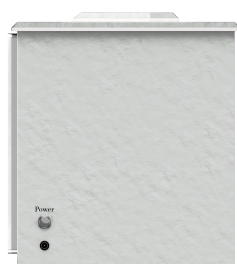

2. The GemLightbox photography kit comes with a photography table, magnetic stand and a necklace & earring stand.

To set up the photography table, place the magnetic stand in the middle of GemLightbox and place the photography table on top. The photography table works best with flat jewelry pieces.

To use the necklace & earring stand, simply hang your jewelry on the grooves or stud holes and place it in the middle of GemLightbox.

3. There are **2 shooting angles** you can use with the GemLightBox.
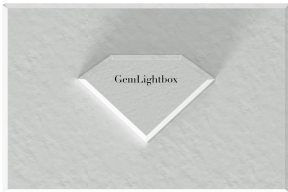

Front shot - This will be your the main shooting angle for your jewelry products. Simply place your phone on the supplied **phone stand**, adjust the angle as required and capture.

3.cont

Top shot - This angle will give you a **birds-eye view** of your jewelry. To shot from the top, remove the diamond piece from the lid to reveal the hole. Now position your phone on the top and capture.

The top shot works best with **larger pieces and with hand photography**.

4. The **front reflector** can be placed **horizontally or vertically** and serves two purposes: flexibility for the front shooting angle; and controlling the reflections captured your metals and stones.

The reflection in your metals in your metals will always look amazing, no matter which way you attach the reflector.

5. Every GemLightbox is fitted with **"Sparkles"** and **"Daylight"**.

Use **"Sparkles"** to bring out the blind facets and sparkles in your gemstones or bring out the fires in opals. To use "Sparkles", simply press the "Sparkles" button the side. "Sparkles" does not change the true colour of your jewelry.

Use **"Daylight"** to bring out the warmer tones in your jewelry. "Daylight" works best with coloured gemstones and hand photography. To use "Daylight", simply press the "Daylight" button the side. Please note that your images will not appear on a white background when you shoot with "Daylight".

"Sparkles" and "Daylight" work best when **shooting videos** and can be **used together** to bring the best out of your jewelry!

Other Information

Tips & Tricks

Utilise these little tips and tricks before you start shooting so you will have better consistency with your jewelry images.

1. Clean your smartphone camera with a micro-fibre cloth
2. Clean your jewelry and where possible use gloves
3. Turn off HDR in your camera settings
4. Turn on the gridlines for your camera
5. Always use the phone stand when taking photos

We recommend using the GemLightbox application to photograph your images. The GemLightbox application will automatically optimise your smartphone camera settings for jewelry photography. You can download the GemLightbox application from the App Store or Google Play simply by searching for "GemLightbox" and following the download instructions.

Frequently Asked Questions

Q. How can we contact support?
A. You can contact our support team by using the contact details at the bottom of this page or from the following page:
http://www.komet-jewellery.com

Q. What is the warranty?
A. Unless specified by your country, GemLightbox comes with 2-year warranty.

Q. How can I clean GemLightbox?
A. GemLightbox is very durable. You can use a wet cloth or any household cleaner to clean your GemLightbox. Please ensure your GemLightbox is turned off and power cable detached before cleaning.
